## Reflexive Cartography: A New Perspective in Mapping (Modern Cartography Series) Emanuela Casti

*Reflexive Cartography* addresses the adaptation of cartography, including its digital forms (GIS, WebGIS, PPGIS), to the changing needs of society, and outlines the experimental context aimed at mapping a topological space. Using rigorous scientific analysis based on statement consistency, relevance of the proposals, and model accessibility, it charts the transition from topographical maps created by state agencies to open mapping produced by citizens.

Adopting semiotic theory to uncover the complex communicative mechanisms of maps and to investigate their ability to produce their own messages and new perspectives, *Reflexive Cartography* outlines a shift in our way of conceptualizing maps: from a plastic metaphor of reality, as they are generally considered, to solid tools that play the role of agents, assisting citizens as they think and plan their own living place and make sense of the current world.

- Applies a range of technologies to theoretical perspectives on mapping to innovatively map the world's geographic diversity
- Features a multi-disciplinary perspective that weaves together geography, the geosciences, and the social sciences through territorial representation
- Authored and edited by two of the world's foremost cartographic experts who combine more than 60 years of experience in research and in the classroom
- Presents more than 60 figures to underscore key concepts
