## **Renal Cell Carcinoma** Eric A. Klein

This reference brings together all aspects of renal cell carcinoma, and provides a basis for understanding the disease's origin, progression and responses to immunotherapy. Examining the current status of cytokine, cell-based and chemotherapeutic methods of treatment, this book: discusses the clinical presentation of advanced renal carcinoma and its therapeutic challenges; reviews prognostic factors and the management of renal cell carcinoma occurring with von Hippel-Landau syndrome; summarizes efforts to identify the tumour suppressor gene deleted from chromosome 3 in most renal cell carcinomas; explicates the role of oncogenes in the progression of renal cell cancer and the molecular correlates of responses to interferon-alpha treatment; details the latest laboratory efforts to establish gene therapy for tumour treatment by transfection of cytokine genes in murine model systems; focuses on biologic response modifier therapy in humans, including cell-mediated immune responses and adoptive immunotherapy; presents preclinical and clinical studies of interleukin-2 alone, in combination with other cytokines, and with chemotherapeutic agents; and addresses studies on the tumour necrosis factor and low- and high-dose interferon-alpha.
